

JED Display Assembly Instructions

Thank you for purchasing JED's retail assortment! The following instructions should guide you to a stable and strong display where ever you choose to assemble it.

Included:

- 1 Display base
- 4 Shelves
- 4 dividers
- Boxes for poles on sides of display
- Plastic hooks for poles
- Plastic clips for shelf stability
- Signage

Steps:

- Once the displayer is unpackaged and all items are accounted for, stand up the displayer like in image B.
- Next, slide the plastic clips into the slots located on each of the sides. Image C to the right shows how the clips fit in the cardboard.
- Once the displayer is upright and the clips have been placed into their slots, start folding each of the shelves. The cardboard flaps on the side and back should be folded down and the front of the shelf should be folded upwards. See image D for a look at a folded shelf.
- Take the folded shelves and place them into the slots on the display should in image E. There are plastic ends on the front of the shelves that will slide into the clips.
- As you continue to slide the shelves into their spots, place the corresponding horizontal divider to separate the shelf space in half **there is a specific divider for each of the shelves so start with the bottom and work up**. The largest divider is on the bottom and the smallest goes on the top.
- Continue to the top of the display until there are 4 shelves and the displayer is complete and looks close to image A. Slide the signage on top of the displayer.
- The last step is to get the pole holders in place. We recommend using round head fasteners to keep the clips secure to the box. See image F for a secure clip.
- Once the displayer is fully assembled, load the pool maintenance equipment! Image A should give you an idea for placement of items. Feel free to email Sales@JEDPoolTools.com if you have any additional questions.
